

# The science of sustainable cleaning

Fat, oil, grease (FOG) & sugar are found in EVERY restaurant and lead to slippery floors, clogged drains and foul odors. BioProtect FOG & Sugar Eliminator delivers the most powerful, effective and easy-to-use solution for expensive drain, floor and surface problems. Unlike harsh chemical and enzyme cleaners, BioProtect actually dissolves organic materials.

- ✓ Eco-Friendly
- ✓ Non-Corrosive
- ✓ Non-Toxic

## FOG & SUGAR ELIMINATOR

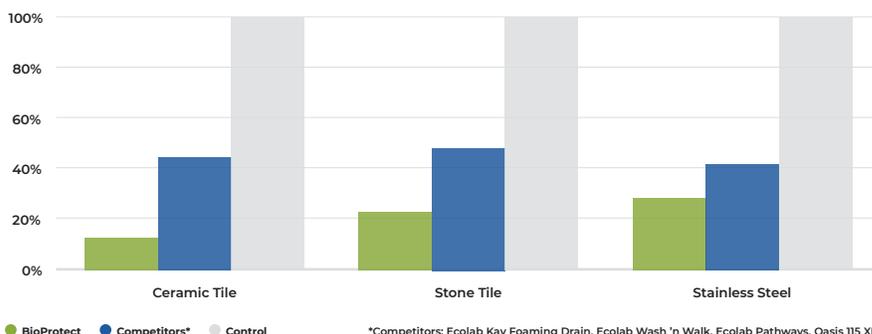

# A scientifically better clean

BioProtect's unique single strain of bacteria (*Bacillus subtilis*) converts sugar into one of the world's strongest biodegredients, Surfactin. This biodegredient is the basis for our patented FOG & sugar-fighting formula. BioProtect FOG & Sugar Eliminator attaches to the organic material and actually eats it, eliminating it altogether.

**BioProtect removes over 3 times more surface FOG** than any product on the market.

% of FOG (Grease) remaining after one light swipe without scrubbing.

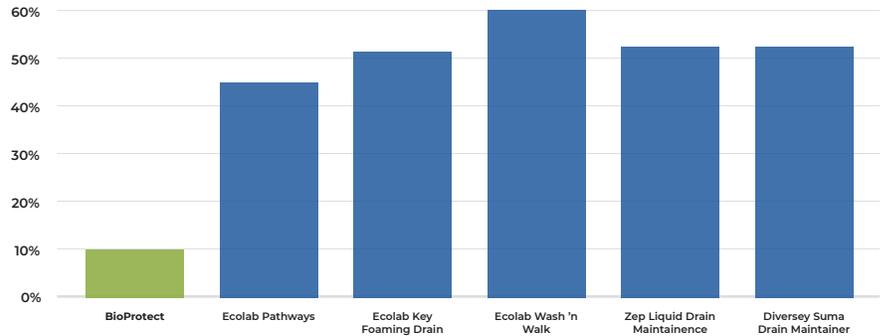

Bacteria continues to produce surfactin which means BioProtect FOG & Sugar Eliminator is constantly working.

# The impact of FOG & sugar

FOG & sugar usually end up in drains and sewer pipes through the dishwasher, floor drains or sink, and leave a film on floors and equipment. Over time, FOG & sugar will solidify in drains, narrowing the pipe's opening and eventually clogging the pipe. This leads to overflow into your restaurant or the storm drains.

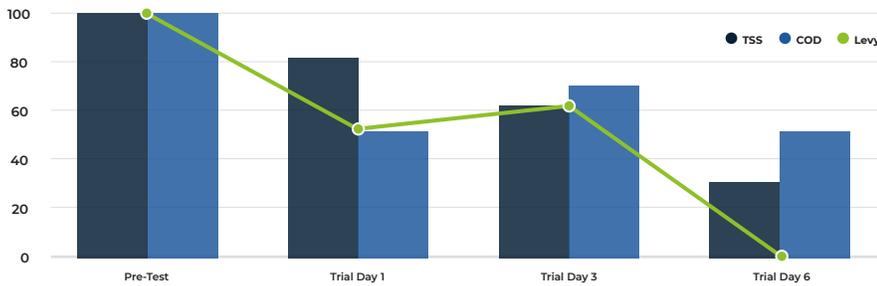

**BioProtect eliminates 90% of FOG in drains, 40% more than competing products.**

**BioProtect eliminates FOG to improve water quality** in grease traps, reducing costly fines and levies.

Reduction in Chemical Oxygen Demand (COD) and Total Suspended Solid (TSS) in grease traps over 6 days, with reduction of water board levy fees.

**i** Unlike traditional cleaners, BioProtect's patented formula fully breaks down organic material, getting straight to the root cause of drain clogs, slippery floors and foul odors.

If not eliminated, FOG & sugar can...

**Endanger public health**

by releasing bad bacteria, viruses and other pathogens that spread diseases.

**Be harmful to the environment**

by polluting nearby rivers, lakes, streams and critical waterways.

**SUSTAINABLE BENEFITS**

One product less waste

Safe for the environment and employees

No PPE personal protection equipment

Renewable ingredients

Non-hazardous and Non-corrosive

**BioProtect**
